

SIXTH EDITION

PSYCHOLOGY

G. NEIL MARTIN

NEIL R. CARLSON

Pearson

Pearson

At Pearson, we have a simple mission: to help people make more of their lives through learning.

We combine innovative learning technology with trusted content and educational expertise to provide engaging and effective learning experiences that serve people wherever and whenever they are learning.

From classroom to boardroom, our curriculum materials, digital learning tools and testing programmes help to educate millions of people worldwide – more than any other private enterprise.

Every day our work helps learning flourish, and wherever learning flourishes, so do people.

Chapter 1 The science of psychology

What you should be able to do after reading Chapter 1

Questions to think about

What is psychology?

Psychology defined

How much of a science is psychology?

Controversies in psychological science: Replication

Controversies in psychological science: Is psychology common sense?

Explaining behaviour

Established and emerging fields of psychology

Psychology in action: How to detect a liar?

Psychology: a European perspective

Cutting edge: How not to use the internet

Psychology: An international perspective

Cutting edge: Which cities produce the best psychology research?

Psychological training and status of psychology in Europe

European views of psychology and psychologists

Psychology: the development of a science

Philosophical roots of psychology

Modern psychology: from the Leipzig laboratory to the cognitive revolution

Structuralism: Wilhelm Wundt

Memory: Hermann Ebbinghaus

Functionalism: William James and James Angell

Evolution and heritability: Charles Darwin and Francis Galton

Psychodynamic theory: Sigmund Freud

Table of Contents

Behaviourism: Edward Thorndike and Ivan Pavlov

Behaviourism: John B. Watson

Radical behaviourism: Edward Tolman and Clark Leonard Hull

Radical behaviourism: Burrhus Frederic Skinner

Genetic epistemology: Jean Piaget

Gestalt psychology: Max Wertheimer

Humanistic psychology

Individual differences: Gordon Allport, Raymond Cattell, Hans Eysenck,

Walter Mischel, Paul Costa and Robert McCrae

The development of social psychology

The cognitive revolution: beyond behaviourism

The biological revolution

Cognitive neuroscience: the future of the biology of the mind?

Conceptual and historical issues in psychology

Chapter review

Suggestions for further reading

Chapter 2 How to study behaviour

What You Should Be Able To Do After Reading Chapter 2

Questions To Think About

The process of discovery in psychology: the scientific method

Stages in experimentation

Communicating the results of scientific research

Constructing a hypothesis

Psychology in action: Communicating psychology

Creating a theory

Quantitative research methods: designing an experiment

Psychology in action: The Barnum effect

Nation-level studies An international perspective

Cutting edge: Psychology's new recruitment drive

Response bias An international perspective

Psychology in action: Horses for courses

Correlational studies

Single-case studies

Meta-analysis

Qualitative analysis

Ethics

Research with human participants

Informed consent

Controversies in psychological science: When is it right to deceive participants in psychological studies?

Chapter review

Table of Contents

Suggestions for further reading

Chapter 3 Evolution, genetics and behaviour

What You Should Be Able To Do After Reading Chapter 3

Questions To Think About

The development of evolutionary theory

In the beginning: the voyage of the Beagle

The Origin of Species

Darwin's theory of evolution

Human evolution

Natural selection and human evolution

Heredity and genetics

The basic principles of genetics

Genetic diversity

Influences of sex on heredity

Mutations and chromosomal aberrations

Epigenetics

Heredity and behaviour genetics

Cutting edge: Genetics and legal decision-making

Sociobiology and evolutionary psychology

Reproductive strategies and the biological basis of parenting

Cutting edge: Beards, high heels, lipstick, cash, cads and dancing
some influences on attraction

Psychology in action: The universality of attractive body types

Controversies in psychological science: Does women's preference for different
types of men change across the menstrual cycle?

Controversies in psychological science: Oxytocin and trustworthiness

Cutting edge: Kisspeptin and sexual arousal

Infidelity An international perspective

Altruism and kin selection

Sociobiology and evolutionary psychology as an explanation for human behaviour

Chapter review

Suggestions for further reading

Chapter 4 Psychobiology and neuroscience

What You Should Be Able To Do After Reading Chapter 4

Questions To Think About

Psychobiology and neuroscience

The nervous system: the brain and its components

The central nervous system

Cutting edge: Are sex differences in the brain actually size differences?

the peripheral nervous system

Cells of the nervous system

Table of Contents

Brain research An international perspective

Controversies in psychological science: Can the brain create new neurons?

Neurotransmitters

The action potential

Synapses

Excitation and inhibition

Neuromodulators: action at a distance

Techniques in psychobiology and neuroscience

Lesioning

Studying brain injury: clinical neuropsychology

Rehabilitation after brain injury

Plasticity in people without brain injury

Psychophysiology: measuring CNS activity

Psychophysiology: measuring activity outside the CNS

Neuroimaging techniques

Measures of brain structure

Cutting edge: Pupil, behave

Measures of brain function

Cutting edge: Pupil, behave

Measures of brain function

Some issues with neuroimaging

Cutting edge: Are brain scanners stressful?

Cutting edge: Using neuroimaging to understand why some people hate specific sounds

Controversies in psychological science: Can brain scanners detect deception?

Modern brain stimulation: transcranial magnetic stimulation (TMS)

Other techniques

Organisation of the cerebral cortex

Cutting edge: The trouble with Einstein's brain

Primary sensory and motor cortex

Temporal sequencing of events

Lateralisation of function

Handwriting and tool use

Cutting edge: How do we think machines think?

Vision: the occipital lobe

Audition and language: the temporal lobe

Somatosensation and spatial perception: the parietal lobe

Thinking, doing, feeling: The frontal lobes

Control of internal functions and automatic behaviour

Cutting edge: What's the brain's most popular region?

The brain stem

The cerebellum

Table of Contents

Subcortical structures

Brain function An international perspective

Drugs and behaviour

Stimulating or inhibiting the release of transmitter substances

Stimulating or blocking postsynaptic receptor molecules

Inhibiting reuptake

Sedatives

Stimulants

What is drug addiction?

Psychology in action: The psychological consequences of taking ecstasy

Drugs and altered states of consciousness

Drug classification

The psychology of cannabis use An international perspective

Chapter review

Suggestions for further reading

Chapter 5 Sensation

What You Should Be Able To Do After Reading Chapter 5

Questions To Think About

Sensation and behaviour

Sensory processing

Transduction

Sensory coding

Psychophysics

Vision

Light

The eye and its functions

Colour vision

Defects in colour vision

Psychology in action: Seeing (and acting on) red

Audition

Sound

The ear and its functions

Detecting and localising sounds in the environment

The interaction between audition and vision

Audition and the temporal cortex

Cutting edge: Kiki or Bouba?

Deafness

Gustation

Taste receptors and the sensory pathway

Taste and the cortex

Qualities of taste

Table of Contents

The development of taste preference

Supertasters

Olfaction

Odour perception An international perspective

Anatomy of the olfactory system

The primary and secondary olfactory cortex

Controversies in psychological science: Do human pheromones exist?

The dimensions of odour

Cutting edge: What does weight stigma smell like?

Sex differences

The somatosenses

The skin senses

Pain

The internal senses

Cutting edge: The effect of your social network on pain reduction

The vestibular senses

Cutting edge: The vestibular sense and ballet dancers

Chapter review

Suggestions for further reading

Chapter 6 Perception

What You Should Be Able To Do After Reading Chapter 6

Questions To Think About

The nature of perception

Definition of perception

Perception of form

Figure and ground

Organisation of elements: the principles of Gestalt

Models of pattern perception

Top-down processing: the role of context

Direct perception: Gibsons affordances

Face perception

Gaze An international perspective

Cutting edge: Trustworthy faces

Perception of space and motion

Depth perception

Psychology in action: CCTV and face recognition

Distance and location

Constancies of visual perception

Visual perception across cultures

Controversies in psychological science: That dress

Perception of motion

Table of Contents

Controversies in psychological science: How does language influence visual perception?

Perception and the environment An international perspective

Does language affect our understanding of spatial relations?

Brain mechanisms of visual perception

The primary visual cortex

The visual association cortex

The special case of faces: evidence from neuroimaging

Brain damage and visual perception

Perceptual disorders

Psychology in action: How does brain injury affect artists?

Chapter review

Suggestions for further reading

Chapter 7 Learning and behaviour

What You Should Be Able To Do After Reading Chapter 7

Questions To Think About

The purpose of learning

Habituation

Classical conditioning

Pavlov's serendipitous discovery

The biological significance of classical conditioning

Basic principles of classical conditioning

Conditional emotional responses

What is learned in classical conditioning?

Neurobiological correlates of Pavlovian conditioning

After behaviourism

Hull's computational approach to learning

Tolman and the cognitive map

Operant conditioning

The law of effect

Skinner and operant behaviour

The three-term contingency

Reinforcement, punishment and extinction

Other operant procedures and phenomena

Conditioning of complex behaviours

Aversive control of behaviour

Applications of operant conditioning to human behaviour

Does multi-tasking exist?

Cutting edge: Can learning chess improve cognitive ability?

Cutting edge: Deliberate practice

Psychology in action: Drug use and abuse

Table of Contents

Artificial intelligence

Parallel processing and neural networks

Learning in practice: being a student

Deep v. shallow learning

Controversies in psychological science: Do learning styles exist?

Cheaters profiled

Cutting edge: OMG, should I text in class?

Personality and academic success

Confidence

Groupwork

The best way to understand a textbook

Cutting edge: Writing skills and academic achievement

Studying psychology An international perspective

Chapter review

Suggestions for further reading

Chapter 8 Memory

What you should be able to do after reading Chapter 8

Questions to think about

Memory: an introduction

Types of memory

Sensory memory

Iconic memory

Echoic memory

Short-term memory (STM)

Working memory

Primacy and recency effects

The limits of short-term and working memory

Loss of information from short-term memory

Learning and encoding in long-term memory

The consolidation hypothesis

Levels of processing

Mnemonics and memory aids

Long-term memory: episodic and semantic memory

Episodic memory across the ages

Explicit and implicit memory

Memory An international perspective

Are there sex differences in memory?

Remembering

Reconstruction: remembering as a creative process

Why do we remember the things that we do?

Table of Contents

Controversies in psychological science: How long does memory last?

The malleability of memory

Eyewitness testimony

Cutting edge: Beliefs about repressed memory

Eyewitness identification

Cutting edge: How much do people know about memory?

Interference

State-dependent memory: the effect of mood on recall

Flashbulb memories

Cutting edge: The Apple of your eye

Controversies in psychological science: Does brain training work in healthy individuals?

The biological basis of memory

Before memory: learning

Where are long-term memories formed?

Chemical modulation of long-term potentiation

Amnesia

The role of the hippocampus in memory

Psychology in action: Memory at the movies

Neuroimaging and memory

Chapter review

Suggestions for further reading

Chapter 9 Consciousness

What you should be able to do after reading Chapter 9

Questions to think about

Consciousness: an introduction

Philosophical approaches to consciousness

The meaning of consciousness

Theories of consciousness

Neurobiological theories

Cognitive theories

Selective attention

Dichotic listening

The cocktail-party phenomenon

Background noise

Controversies in psychological science: Does mobile phone use impair your driving?

Noise An international perspective

Models of selective attention

Visual information

Inattention blindness

Table of Contents

Divided attention

Controversies in psychological science: Well, are you lovin it?

The evidence for subliminal perception

Brain mechanisms of selective attention

Cutting edge: Banner ads do they work?

Psychology in action: Attention and pain

Hypnosis

The induction of hypnosis

Characteristics of hypnosis

Theories of hypnosis

Controversies in psychological science: Can hypnosis reduce pain and stress?

Sleep

The stages of sleep

Chronotypes

Functions of sleep

Sleep deprivation

Effects of REM sleep deprivation

Sleep-dependent memory consolidation

How sleep loss affects behaviour

Cutting edge: How sleeping children learn better than sleeping adults

Dreaming

Brain mechanisms of sleep

Cutting edge: Does eating cheese or any other food affect the quality of your dreams?

Psychology in action: And the key to a good nights sleep is

Sleep disorders

Chapter review

Suggestions for further reading

Chapter 10 Language and Communication

What you should be able to do after reading Chapter 10

Questions to think about

The use of language

Psycholinguistics: the study of language acquisition and meaning

Perception of speech

Recognition of speech sounds

Production of speech

Recognition of words: the importance of context

Understanding the meaning of speech

The relationship between semantics and syntax

What is meaning?

Cutting edge: The impact of words

Table of Contents

Is there a universal language?

Sex differences in communication

Controversies in psychological science: Do Davids and Denices die younger?

Reading

Scanning text

Phonetic and whole-word recognition

The process of reading

Cutting edge: Which words predict academic success?

Models of reading I: dual-route model

Models of reading II: connectionism/parallel distributed processing

How children learn to read

Controversies in psychological science: Does speed-reading work?

Understanding the meanings of words and sentences

Cutting edge: Can multimedia stories improve childrens literacy?

Language acquisition by children

Perception of speech sounds by infants

Infant communication

The pre-speech period and the first words An international perspective

Acquisition of adult rules of grammar

Acquisition of meaning

Is there a language acquisition device?

Psychology in action: The language of food

Bilingualism

Controversies in psychological science: Can other primates acquire language?

Brain development and language

The case of Genie

Plasticity and language development

Is half a brain enough?

The neuropsychology of language and language disorders

Language disorders

Aphasia

Psychology in action: The man who lost his language: the phenomenology of aphasia

Language and genes

Dyslexia

Psychology in action: How to help people with developmental dyslexia

Language in healthy individuals: neuroimaging and other studies

Cutting edge: Harry Potters other contribution to the English language

Neuropsychological models of language

Sex differences

Language and the right hemisphere

Table of Contents

Neuropsychology and language An international perspective

Cutting edge: What happens in the brain during second language (vocabulary) learning?

Handedness

Chapter review

Suggestions for further reading

Chapter 11 Intelligence and thinking

What you should be able to do after reading Chapter 11

Questions to think about

What is intelligence?

Theories of intelligence

Spearman's two-factor theory

Evidence from factor analysis

Sternberg's triarchic theory of intelligence

Cutting edge: Hobbies and cognitive ability

Gardner's multiple intelligences theory

Process overlap theory

Emotional intelligence

Cutting edge: Are clever people funnier?

Are there consistent sex differences in cognitive ability?

Theories of differences in spatial performance

Cutting edge: Why do men do better than women in final degree exams at Oxford?

Intelligence testing

Early intelligence tests

Modern intelligence tests

Reliability and validity of intelligence tests

Cutting edge: Are we getting brighter? Up to a point

Cutting edge: Are liberals brighter than conservatives?

The roles of heredity and environment

The meaning of heritability

Sources of environmental and genetic effects during development

Results of heritability studies

If intelligence is inherited, how does inheritance occur?

The effect of intelligence on health

Psychology in action: Can low intelligence be improved?

Controversies in psychological science: Is there a relationship between race and intelligence?

Intelligence, thinking and ageing

The neural basis of intelligence

Ageing and cognitive ability

What is ageing?

Table of Contents

Neurocognitive disorder (dementia) and Alzheimers disease

Memory decline in Alzheimers disease

Intervention

Dementia and the novelist: the case of Iris Murdoch

Thinking

Classifying

Formal and natural concepts

Deductive reasoning

Inductive reasoning

Syllogistic reasoning An international perspective

Logical errors in inductive reasoning

Cutting edge: Counterfactual thinking

Psychology in action: Jury decision-making

Problem-solving

Reasoning, decision-making and the brain

Cutting edge: Expertise

Creative thinking

Cutting edge: The creative scientist

Controversies in psychological science: Are creativity
and psychopathology related?

Chapter review

Suggestions for further reading

Chapter 12 Developmental psychology

What you should be able to do after reading Chapter 12

Questions to think about

Developmental psychology

Prenatal development

Stages of prenatal development

Physical and perceptual development in infancy and childhood

Brain development

Controversies in psychological science: Does foetal learning exist?

Does environment affect brain development?

Cutting edge: White matter and white matter does breastfeeding affect the
development of white matter in the brain?

Motor development

Cutting edge: is there a relationship between studying at home and childrens
brain structure?

Development of perceptual ability

Cognitive development in infancy and childhood

Number sense

Development of memory

Table of Contents

The autobiographical bump

Knowing where things are spatial development at 2 years old

The development of cognition: Jean Piaget

Vygotskys sociocultural theory of cognitive development

Social and emotional development in infancy and childhood

Infant attachment

The nature and quality of attachment

Ainsworths Strange Situation

Predictors of secure attachment

Theory of mind

Relationships with siblings

Social organisation An international perspective

The psychological consequences of being mathematically gifted

Relationships with others

Disorders of social cognitionand emotion

Autism spectrum disorder

Autism An international perspective

Conduct disorder/attention deficithyperactivity disorder

Emotion, attachment and hemisphericasymmetry

Development of sex rolesin childhood

Development of sexual identity

Moral development

Piagets theory of moral development

Kohlbergs theory of moral development

Morality across cultures An international perspective

Evaluation of Piagets and Kohlbergs theories of moral development

Alternative models of moral development

Adolescence

Physical development

Sexual maturation

Behavioural effects of puberty

How do adolescents view puberty?

Social development, peer relations and delinquency

Psychology in action: Adolescents and the internet

Adolescence and mental health

Friendship

Psychology in action: Bullying

Relationships with parents

Adulthood: beyond adolescence

Middle adulthood: a period of contentment?

Parenthood

Table of Contents

Cutting edge: How does parenting affect the parents. . . brain?

Late adulthood and the menopause

Old age

Death and bereavement

Chapter review

Suggestions for further reading

Chapter 13 Motivation and emotion

What you should be able to do after reading Chapter 13

Questions to think about

Motivation

Biological needs

Physiology of reinforcement

Ingestion: drinking and eating

Thirst

What starts a meal?

What stops a meal?

Mood, food and emotion

Psychology in action: The social psychology of eating

Music and food intake

Sensory-specific satiety

The role of the brain in hunger, obesity and perception of food flavour

Cutting edge: How healthy are ready meals compared with cookbook meals?

Obesity and its treatment

Anorexia nervosa

Bulimia nervosa

Aetiology of anorexia and bulimia nervosa

Body dissatisfaction in healthy and eating-disordered women

Sexual behaviour

Eating disorders An international perspective

Effects of sex hormones on behaviour

Sexual orientation

Aggressive behaviour

Ethological studies of aggression

Cutting edge: What we do and don't know about sexual orientation

Cutting edge: Sexual behaviour and the eyes

Hormones and aggression

Testosterone and dominance

Emotion

Psychology in action: Aggression at work

Basic emotions

Controversies in psychological science: Are conservatives happier than liberals?

Table of Contents

The neural basis of emotion
Emotion An international perspective
Cutting edge: What do emotion researchers agree on?
Emotional experience: anger and disgust
Sex differences in emotion
Cutting edge: Music and emotion
Crying
The odour of sanctity
Using display rules
Facial feedback hypothesis
Posture and emotion
Psychology in action: Should you smile during an interview?
Cutting edge: Exploring the Kuleshov effect
Facing emotion

Theories of emotion

Physiological theories
Cutting edge: Heroes do they tend to the right?
Evolutionary theories
Cognitive theories
Other models
Emotional distance
Emotion without cognition?
Happiness An international perspective
Controversies in psychological science: Dark clouds gathering, sunny spells later. . .
Cutting edge: The cognitive consequences of oral contraception
Chapter review
Suggestions for further reading

Chapter 14 Personality

What You Should Be Able To Do After Reading Chapter 14

Questions To Think About

Towards a definition of personality

Trait theories of personality

Personality types and traits
Identification of personality traits
Stability of personality traits across the lifespan
Cutting edge: Personality and diet
Personality An international perspective
How much of personality is expressed in our writing?
How we view ourselves in the past and the present
Cutting edge: Which personality attributes make a good boss and employee?

Table of Contents

Heritability of personality traits

Personality and birth order

Neurobiological basis of personality

Controversies in psychological science: Can personality predict health and ill health?

The state you're in: a psycho-geography of personality

Cutting edge: Language, personality and Facebook

Psychology in action: Facebook, Twitter, Instagram . . . are we all narcissists now?

The social learning approach

Expectancies and observational learning

Reciprocal determinism and self-efficacy

Person variables

Locus of control

The psychodynamic approach

The development of Freud's theory

Structures of the mind: id, ego and superego

Defence mechanisms

Freud's psychosexual theory of personality development

Further development of Freud's theory: the neo-Freudians

Evaluation of psychodynamic theory and research

The humanistic approach

Maslow and self-actualisation

Rogers and conditions of worth

Evaluation of the humanistic approach

Assessment of personality

Objective tests of personality

Projective tests of personality

Controversies in psychological science: Are projective tests reliable and valid?

Chapter review

Suggestions for further reading

Chapter 15 Social psychology I: Social cognition and attitudes

What You Should Be Able To Do After Reading Chapter 15

Questions To Think About

Social psychology

Doing social psychology

Social cognition and social knowledge

Forming impressions of people

Schema and categories

Group schemata and stereotypes

Cutting edge: Schadenfreude

Table of Contents

When good intentions backfire: stereotypes, influence and behaviour

Cutting edge: Does listening to sexually degrading music lead to endorsement of sexual stereotypes?

Social cognition and neuroscience

Facing racial stereotypes

Stereotypes An international perspective

Controversies in psychological science: Sexist humour does it make you sexist?

Conceptual and historical issues in social psychology

Self-knowledge

Orientations of self-knowledge

Self-awareness

Types of self and identity

Social identity

Self-motives

Self-esteem

Social inference

Causal attribution

Cultural differences in self and identity An international perspective

Implications and extensions of attribution theory

Attributional biases

Attributional processes in relationships

Heuristic judgements

Attitudes and attitude change

The nature of attitudes

Attitudes and behaviour

Attitude change and persuasion

Psychology in action: How not to throw in the towel

Cognitive dissonance

Self-perception

Chapter review

Suggestions for further reading

Chapter 16 Social psychology II: Interpersonal and group processes

What You Should Be Able To Do After Reading Chapter 16

Questions To Think About

Social influence

Compliance

Obedience

Cutting edge: Do we underestimate people's likelihood of complying?

Conformity

The social psychology of attribution An international perspective

Table of Contents

The Stanford Prison Experiment
Cutting edge: Artificial interactions
Minority influence

People in groups

The treatment of marginal groupmembers and deviants
Which is more important the individual or the group?
Social facilitation
Social loafing
Cutting edge: Mobile phone presence and social interaction
Group decision-making
Psychology in action: Leadership
Negotiation, teamwork and leadership An international perspective
When crowds go wrong: football hooliganism
Intergroup relations
prejudice
Cutting edge: An accent on accents
Can we reduce prejudice?

Aggression and helping behaviour

Aggression
Prosocial and helping behaviour
Controversies in psychological science: What did Kitty Genoveses witnesses really witness?

Attraction and relationships

Interpersonal attraction
Cutting edge: Risky business and exposure to erotica
Love
Maintaining and ending relationships
Chapter review
Suggestions for further reading

Chapter 17 Psychology and health

What You Should Be Able To Do After Reading Chapter 17

Questions To Think About

Health psychology: a definition

Health and ill health

Nutrition
Heart disease and eating explaining the French paradox
Physical fitness
Peoples estimates of good health from skin blood perfusion
Controversies in psychological science: Can exercise improve mood?
Cigarette smoking An international perspective
Psychology in action: How to stop smoking

Table of Contents

Changing unhealthy behaviour: e-cigarettes

Alcohol consumption

Sexually transmitted diseases and AIDS

Stress and health

Selye's general adaptation syndrome

The biological basis of stress

Physiological mechanisms involved in stress

Cognitive appraisal and stress

Psychoneuroimmunology

Cutting edge: Can chewing gum reduce stress?

Stress and the immune system

Controversies in psychological science: Can humour improve health?

Cutting edge: Words, connectedness to nature, longevity and the pursuit of happiness

Cutting edge: The neural correlates of living the good life

Coping with everyday stress

Sources of stress

Coping styles and strategies

Do psychological interventions reduce stress?

Chapter review

Suggestions for further reading

Chapter 18 Mental health and illness

What You Should Be Able To Do After Reading Chapter 18

Questions To Think About

Classification and diagnosis of mental disorders

What is abnormal?

The causes of mental disorders

The psychodynamic perspective

The medical perspective

The cognitive behavioural perspective

The humanistic and sociocultural perspective

Classification of disorders

Differences between DSM-IV and DSM-V

How valid and reliable is the DSM?

Stigma

The need for classification

Lay knowledge of mental illness

Mental illness: An international perspective

THE TREATMENT OF MENTAL DISORDERS

The evolution of interventions

Table of Contents

The development of modern treatment

Current treatment: the eclectic approach

Types of treatment

 Psychoanalysis and psychodynamic therapy

 Modern psychodynamic therapy

 Humanistic therapies

 Behavioural and cognitive behavioural therapies

 Other forms of psychotherapy

 Psychology in action: How instructions to express reduce distress

 Mindfulness

 Controversies in psychological science: Does psychotherapy work?

 Biological treatments

 Psychology in action: The placebo effect

 MENTAL DISORDERS

Anxiety disorders

 Generalised anxiety disorder (GAD)

 Panic disorder

 Social anxiety disorder

 Specific phobia

 Psychology in action: Virtual planes can relieve real fear of flying

 Post-traumatic stress disorder (PTSD)

 Obsessive-compulsive disorder (OCD)

Dissociative disorders

Personality disorders

 Antisocial personality disorder and psychopathy

Schizophrenic spectrum and other psychotic disorders

 Types of schizophrenia

 Psychology in action: Treating paranoid schizophrenia

 Cognitive and environmental causes

 Treatment

 Cutting edge: Predicting who will develop psychosis

Depressive disorders

 Aetiology

 Treatment

 Suicide: An international perspective

 Chapter review

 Suggestions for further reading
